| Nazione | Italia |

PRODOTTI O MACCHINARI

Wholesale of Insulation Glass, Car Glass, Safety Glass

In addition to the float line (primary glass production), the site features processing facilities: laminated safety glass, mirrors, acid-etched windows and solar control coatings. The float line produces two types of primary glass:

3 to 6 mm thick float glass: mainly used for products transformed at the same plant (laminated, mirrors, acid-etched, coatings)

8 to 25mm thick float glass: the exclusive "Linea Azzurra" range, highly appreciated by architects and designers for particular interior design needs.

Widely used by architects and designers in projects that demand superb transparency, Planibel Clearvision is the perfect choice when crystal-clear vision and total clarity count. With the introduction of two new thicknesses, the Clearvision range now offers a wide variety of thicknesses ranging from 3 mm to 19 mm, enabling top designers and furniture makers to work with thicker low-iron glass for larger pieces.

Planibel Clearvision is produced in Cuneo, Italy (4 to 19 mm). For the 15 and 19 mm version, a special technology is used to ensure perfectly uniform thickness, making the glass easier to process (cutting, laminating, etc.). In addition, the product's extra-clear, neutral colour is the same in all thicknesses. Even in 15 and 19 mm, Clearvision is perfectly neutral – proof of just how pure this product is.

Planibel Clearvision is Cradle to Cradle Certified™ Bronze. We focus on developing products that have a positive impact on the environment during their lifetime. By committing to C2C standards, AGC can deliver high-quality products while protecting people and the environment, and supporting its customers in their socially and environmentally responsible purchasing decisions. More than 75% of our products are Cradle to Cradle Certified™.
