

Efficient thermal insulation for people, architecture and environment

Moderate thermal insulation and winning of solar energy are the characteristics of SILVERSTAR®

ZERO glass. A economical solution for lasting thermal insulation, specifically for double insulating glazing.

Attributes

- Low energy consumption and thus savings in heating expenses thanks to optimal thermal insulation with a U_g value of $1.0 \text{ W/m}^2\text{K}$
- The higher glass pane temperature ensures more comfort close to the window with respect to a conventional double insulating glazing

Design Attributes

Combination with other EUROGLAS products possible:

- EUROGLAS ESG Flat design and safety with temperable glass
- EUROLAMEX design and safety with laminated glass
- FIRESWISS heat protection glass
- LUXAR® non-reflecting glazings
- EUROWHITE NG for a higher light transmission

Application

Universal use for windows, doors, conservatories and facades.
