UV Curable Materials

H.B. Fuller's family of UV curable materials uses artificial ultraviolet light to rapidly cure the adhesive after application. These versatile products offer several advantages, including capability in high-speed automation, adhesion to a wide range of materials, and excellent end-use performance. Our UV curable adhesives are ideal for a wide range of applications. They are excellent for bonding metal to glass in applications such as solder joint protection and LCD terminal reinforcement, and for plastic bonding, in applications such as wire reinforcement and camera module bonding.
