Nazione	Germania

PRODOTTI O MACCHINARI

Corning Laser Technologies - Laser Machining Systems

Corning's technology offers distinct advantages over conventional cutting processes such as; low surface roughness, faster throughput and increased as-cut bend strength. The material is cut by disassociation rather than ablation leading to many additional benefits.

Unique Benefits

- Cuts: curved, straight, perpendicular, and angled lines
- Cuts extremely fast to maximize throughput
- Dramatically reduces micro-cracks
- Reduces steps for cover glass processing
- Reduces debris (clean room compatible processing)
- Cuts functional multi-layer stacks
- Cuts glass from <50µm up to 3.5mm thickness
- Eliminates fluids and tooling required in traditional processing methods

Smooth Edges

The 'as-cut' edge roughness may eliminate or reduce post-processing time and cost.

High Break Strength

The 'as-cut' edge demonstrates superior break strength over other laser and conventional glass cutting processes as measured by 3 & 4pt bend tests.

Multi-Layer Stacks

The systems can cut assembled stacks with and without air gaps, Cutting depths can be adjusted.

Applications

- Cutting of Glass Substrates
- Separation of Strengthened Glass
- Drilling in Glass Substrates

Company Profile of **Corning Laser Technologies GmbH**
